

LawMitran Admin Console

User Manual — **Auditor (Finance)** · revenue, plans & reconciliation

1. Signing in

Open the website and click **Login** (or use the "Admin portal" link under the sign-in form). Enter your admin email and password. If two-factor authentication is enabled, a 6-digit code is sent to your email — enter it to finish signing in. You land on the admin **Dashboard**.

Note: until company email (SMTP) is configured, 2FA codes are printed in the backend console — ask the technical team.

2. Your access level

As **Auditor** (Finance role) you manage everything money-related: subscription plans, offers, all transactions (subscriptions and document purchases), invoices and reconciliation. You do not see lawyer approvals, content or Settings — those belong to Operations and Super Admin.

The left sidebar only shows the sections your role can use. If a section you need is missing, ask a Super Admin to adjust your admin role.

3. Reading the dashboard

- **Revenue this month** — combined subscriptions + document sales; the hint line shows the split.
- **Failed payments (30d)** — your reconciliation queue; click through to Transactions.
- **Active subscriptions and trials ending in 7 days** — renewal pipeline health.

4. Transactions

The page has two sources: **Subscriptions** and **Documents**.

- **Subscriptions**: filter All / Paid / Pending / Failed; search by lawyer, email or order id. Each row shows plan, amount, order & payment ids and status.
- **Invoice** opens the GST tax invoice for a paid subscription (print from the browser).
- **Mark paid** (reconcile): use ONLY after confirming the money in the Razorpay dashboard. You must record a note (e.g. the UTR you verified). This activates the plan immediately and is written to the Audit Log.
- **Documents**: every document purchase — buyer, document, amount, payment id, status (Paid / Delivered / Payment pending).

5. Plans & offers

- **Plans** — subscription tiers lawyers buy (price, duration, limits such as service-area caps). Price changes affect new purchases only.
- **Offers** — discounts/promotions applied to plans.

6. Audit log

Every sensitive admin action — settings changes, reconciliations, template and content edits, approvals — is recorded with who, what and when. Use the filters to trace any figure you cannot explain. The log is append-only.

7. Month-end checklist

- Transactions → Subscriptions → Failed: resolve or write off every failure.
- Transactions → Pending older than 24h: verify in Razorpay; reconcile or cancel.
- Cross-check dashboard revenue (subs + docs) against the Razorpay settlement report.
- Spot-check five invoices for correct GSTIN, rate and numbering.
- Review the Audit Log for reconciliations you did not perform yourself.

8. Golden rules

- Never mark a payment paid without independent confirmation in the gateway.
- Always write the reason in the reconciliation note — it is your audit trail.
- Report suspected duplicate or fraudulent payments to the Super Admin immediately.
