

LawMitran Admin Console

User Manual — **Manager (Operations)** · lawyers, content & marketplace operations

1. Signing in

Open the website and click **Login** (or use the "Admin portal" link under the sign-in form). Enter your admin email and password. If two-factor authentication is enabled, a 6-digit code is sent to your email — enter it to finish signing in. You land on the admin **Dashboard**.

Note: until company email (SMTP) is configured, 2FA codes are printed in the backend console — ask the technical team.

2. Your access level

As **Manager** (Operations role) you handle the day-to-day: verifying lawyers, managing users, the legal document catalogue, the Legal Help Center, client queries and moderation. You do not see Settings, Plans, Offers or Transactions — those belong to Super Admin and Finance.

The left sidebar only shows the sections your role can use. If a section you need is missing, ask a Super Admin to adjust your admin role.

3. Approving lawyers

- Open **Lawyers** — the queue lists profiles awaiting review.
- Open a profile: check the Bar Council certificate and ID photo against the enrolment number and state.
- **Approve** — the lawyer becomes visible in public search immediately.
- **Reject with a comment** — the lawyer sees your reason and can fix documents and resubmit.
- A rejected/suspended lawyer never appears in search; an approved lawyer with an expired subscription stays visible but stops receiving new leads automatically.

4. Legal documents (templates & orders)

Documents has three tabs: Templates, Categories, Orders.

- Create a template with the title box, then open it to edit details, price, keywords, stamp requirement.
- The **guided form fields** define the wizard customers fill. Field types: text, textarea, date, number, select, **toggle** (button chips, e.g. Residential/Commercial) and **checkbox** (optional clauses).
- The **document body** holds the legal text. `{{fieldName}}` inserts an answer. Conditional text: `{{#if pets}}...{{/if}}` and `{{#eq purpose "Commercial"}}...{{else}}...{{/eq}}` — see [docs/document-marketplace/TEMPLATE-SYNTAX.md](#).
- Add a **How-to video URL** (YouTube) to show a walkthrough above the form on the public page.
- Save, then use **Sample preview** (renders the saved version). Publishing puts it on sale; editing a published template bumps its version — already-purchased documents are never changed.
- **Orders** shows purchases; full financial reconciliation lives with Finance in Transactions.

5. Legal Help Center (content)

- The landing screen shows buckets: **All, Drafts, Pending Review, Scheduled, Published, Archived** — click a card to filter, use the type dropdown for Guides / News / Judgments / Notifications / FAQs.
- Create a draft, then edit: title, slug, excerpt, body, structured sections, FAQs, SEO fields (watch the meta-description counter), category, tags.
- **Practice areas** are chosen from the platform master list (chips) — picking a category auto-suggests one. **State chips** limit applicability; empty means all-India.
- Workflow: Draft → In Review → Published → Archived. To schedule, pick a future date/time in "Schedule publish" — the item stays hidden until then and shows in the Scheduled bucket.
- Every save records a revision snapshot (see Revision history in the editor).
- **Reviewers**: add only a real advocate who has agreed to review. Assign them on an article and set "Legally Reviewed" — the public page then shows "Reviewed by ..." and search engines are told. Until then the article honestly shows "Pending Legal Review".

6. Users, queries & moderation

- **Users** — search clients, suspend/restore accounts.
- **Client Queries** — public contact-form messages; respond and close.
- **Moderation** — reported reviews and lawyers; act and record the outcome.
- **Practice Areas** — the master list used by lawyer onboarding, search and content tagging. Rename carefully: it changes everywhere.

7. Golden rules

- Verify Bar Council documents carefully — approval puts a lawyer in front of the public.
- Never invent reviewer or author names for content.
- Prefer editing templates as Draft; publish only after Sample preview looks right.
- Use exact, honest rejection comments — lawyers see them verbatim.
