

LawMitran Admin Console

User Manual — **Super Admin** · full platform control

1. Signing in

Open the website and click **Login** (or use the "Admin portal" link under the sign-in form). Enter your admin email and password. If two-factor authentication is enabled, a 6-digit code is sent to your email — enter it to finish signing in. You land on the admin **Dashboard**.

Note: until company email (SMTP) is configured, 2FA codes are printed in the backend console — ask the technical team.

2. Your access level

As **Super Admin** you can use every section of the console: lawyer approvals, users, plans, offers, practice areas, documents, Legal Help Center, client queries, moderation, transactions, the audit log, and — exclusively — **Settings**. You also assign admin sub-roles (Operations / Finance) to other staff.

The left sidebar only shows the sections your role can use. If a section you need is missing, ask a Super Admin to adjust your admin role.

3. Dashboard

The dashboard refreshes every minute and shows the operational snapshot:

- **Pending reviews** — lawyers waiting for verification. Click through to Approvals.
- **Awaiting onboarding** — lawyers who signed up but have no profile yet; use "Nudge" to remind them.
- **Failed payments (30d)** — reconcile from Transactions.
- **Revenue this month** — combined total; the small line shows the split between subscriptions and document sales.
- **Open client queries / reports** — support and moderation queues.
- **Trials ending in 7 days** — renewal reminders go out automatically.
- The **lawyer onboarding funnel** shows where signups stall.

4. Settings (Super Admin only)

Settings control platform behaviour without code changes. Each group saves independently; values override server environment defaults and take effect within about 30 seconds.

- **Payments** — Razorpay keys and mode (test/live), currency.
- **Email / SMS / WhatsApp** — gateway credentials; while unset, OTPs and mails print to the server console.
- **reCAPTCHA** — bot protection on signup/login/forgot-password.
- **AI** — provider, API key and model for AI prefill and intake guidance.
- **Documents (DOCS_*)** — feature switches for the document marketplace: PDF downloads, watermark, QR, lawyer review, e-Sign/e-Stamp providers, PDF engine. Each can be turned on/off independently.
- **Security & compliance** — admin 2FA, grievance officer details.
- **Billing & GST** — GSTIN, legal name, invoice prefix, GST rate for tax invoices.

- **Business rules** — trial days, renewal reminder days, lead SLA hours.

Every change is written to the Audit Log with your identity — changes are traceable.

5. Everything the Manager can do

You inherit the full Operations workflow: lawyer approvals, users, documents & templates, Legal Help Center content, client queries, moderation and practice areas. See the Manager manual for the step-by-step of each; the flows are identical for you.

6. Everything the Auditor can do

You also inherit the Finance workflow: plans, offers, transactions (subscriptions and document purchases), invoices and reconciliation. See the Auditor manual for details.

7. Golden rules

- Never share your password; enable admin 2FA in Settings for all admin accounts.
- Reconcile a payment as "paid" only after confirming the money in the Razorpay dashboard.
- Turn document features (e-Sign, e-Stamp, lawyer review) on only after the corresponding provider is configured.
- Assign a real advocate as content reviewer only with their consent — until then the site correctly shows "Reviewer: To Be Assigned".
- Check the Audit Log when anything looks unexpected — every admin action is recorded.
